StoColor System

Symbolforklaring

R17 44 50

Farvetone nummer

Kun tilgængelig i dispersionsbundne indendørsprodukter og StoColor Dryonic® S.

14

Lysrefleksionsværdi (LRV)

C3

Farvetoneklasse

Angiver toningstillæg

Lotusan®/StoColor Lotusan
Sto Color Silco

Farvetonen kan produceres

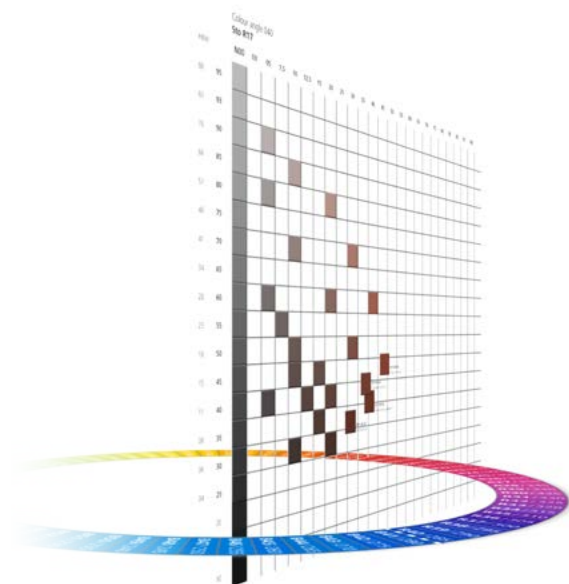

Sto-Silikatfarber

StoLotusan K/MP
Sto-Silikatpuds

Farvetonen kan produceres

Xb25/Xb30

Produktet overholder en TSR-værdi (total solar reflection) på max 25 eller 30 i X-Black versionen af produktet.

Alle 72 farveområder i StoColor-systemet indeholder hver især mellem 6 og 30 farvetoner og er opdelt i tre segmenter (Y - R - B).

Sådan læses en farvekode

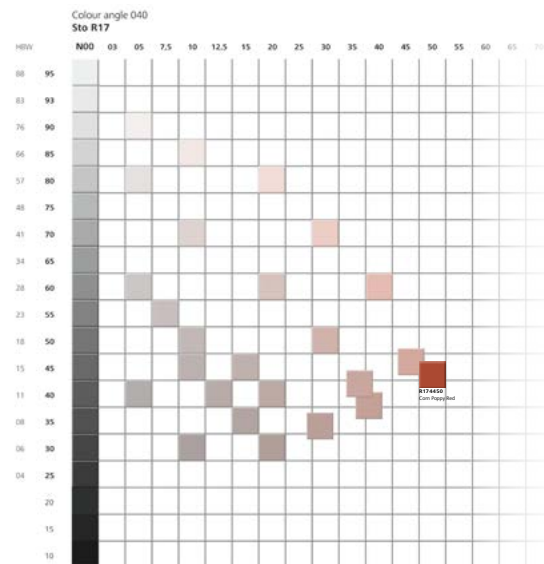

Fx: R17 44 50

R17 = Position i farvecirklen

44 = Hvor lys farven er, iht. CIELAB

50 = Hvor mættet farven er, iht. CIELAB-HLC

Interior Colors 24+ 50 nuancer – Inspired by nature

De 50 farvetoner supplerer StoColor-systemet tematisk med naturen som forbillede. Farvetoner, der svarer til historiske farveplanter, er særskilt markeret.

Fx: **R17 44 50** Corn Poppy Red

Farvetoner uden denne markering er farvetoneassociationer til planteriget.

Bemærk

Farverne kan på grund af tekniske forhold (skærmmodel, skærmindstillinger osv.) muligvis afvige en smule fra originalen i visningen. Små farveafvigelser fra den originale farvetone kan også skyldes materialet eller trykprocessen (i tilfælde af udskrifter). Ved genbestillinger af farvenumre skal altid opgives ordrenummeret fra den seneste bestilling. Bemærk, at typen og strukturen af underlaget samt strukturen af de enkelte belægninger kan medføre afvigende farvevirkninger, og at der over tid kan forekomme farveændringer.

Krav på grund af farvetoneafvigelser, som skyldes de ovennævnte forhold, kan ikke gøres gældende. Behandlingsanvisninger/tekniske datablad skal følges og kan rekvireres hos de respektive Sto-landeselskaber.

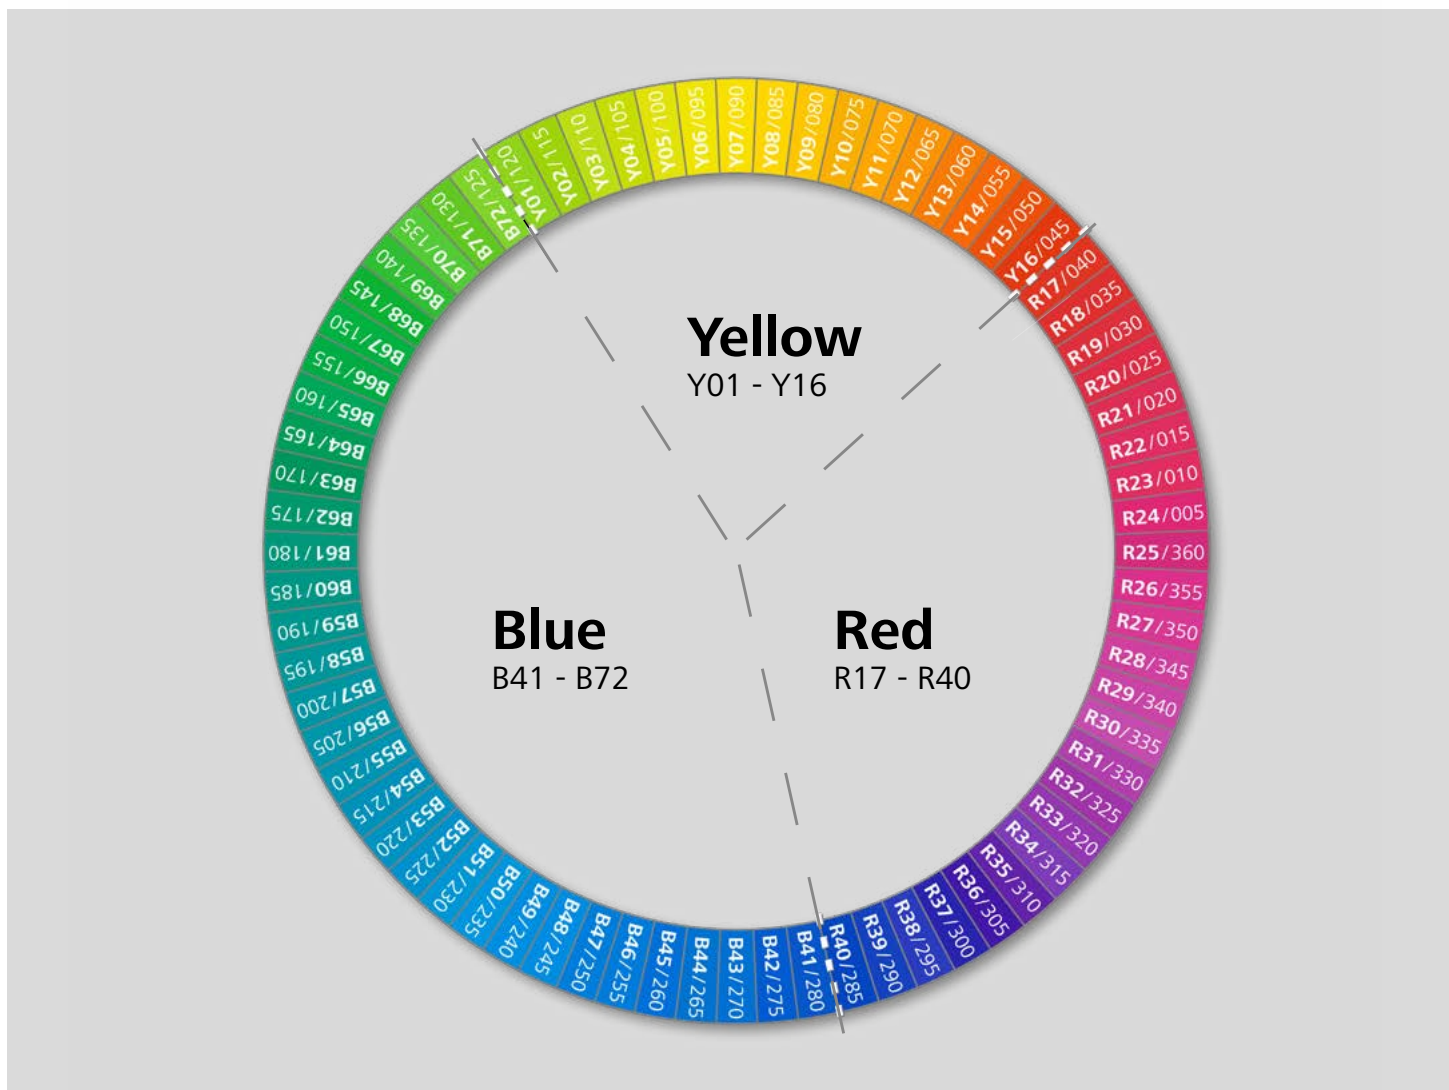

StoColor System

Det nye StoColor-system omfatter på baggrund af et farvemetrisk gitter 1000 farvetoner. Systematikken i dette system er baseret på 72 grundfarver (Y01 – B72) i farvehjulet, som er opdelt efter de primære farveområder **GUL (Y)**, **RØD (R)** og **BLÅ (B)**. Hver af disse inddelinger viser anvendelsesrelaterede blandinger. Farveområdet **NEUTRAL & Natur (N)** supplerer systemet målrettet med sort-, grå- og hvidtoner. Derudover er 65 historisk betydningsfulde eller materialerelaterede farvetoner integreret og navngivet.
